

ECORESPONSIBLE SOLUTIONS

CARROUSEL
Expertly packaged, perfectly customized

Eco-responsibility of products sold by Carrousel: a constantly evolving priority

We are very proud to have launched our Engagement 500 Plus program in 2019. In less than three years, we have added hundreds of eco-responsible products to our selection in addition to raising awareness and informing our customers about products that could limit their impact on the environment.

Since then, several other initiatives have been launched, including our **Carrou-cycle** stretch film recycling program (see page 129) and the introduction of a new line of equipment, **dishwashers** (see page 104), which encourage the transition to reusable dinnerware (see page 100).

This year, more than ever, we want to help shape the industry to ensure it goes even further in its eco-responsible approach. This is why we have decided to **remove all products made of biodegradable plastic**, including PLA. Studies clearly show the harmful end-of life impact of these plastics as well as the incompatibility of some of these materials with composting facilities¹. Certain municipalities have even banned the use of these plastics on their territory (see page 11 for the City of Montreal's regulations).

Given the current lack of recycling options for certain types of plastics, we have also **reduced the number of our plastic products**, even though most are completely recyclable. And because we advocate for a circular economy, we have prioritized containers made of recycled plastic and have introduced **products made in Quebec**, because procuring goods from local manufacturers is clearly the environmentally friendly option.

Making eco-responsible choices will become even more important in the coming years. The state of the climate requires that we all do our part, and it needs to be done now.

At Carrousel, preserving the planet's resources is important to us and we are determined to be a key player in the development of sustainable and eco-responsible solutions in the Canadian packaging industry.

Our actions won't stop here, so stay tuned for our next developments!

Which can be transformed so as to be reintroduced into a production cycle for the manufacture of new products.¹ It is necessary to check whether the products are accepted in your municipality.

Pre-consumer recycled contents are materials that are redirected from the disposal stream during the manufacturing process and introduced for use in a different industrial manufacturing process.

A biodegradable product is likely to be completely decomposed by living organisms.³ The OECD 301D test protocol (Organization for Economic Cooperation and Development) certifies that a product is biodegradable.

Post-consumer recycled contents are materials that are generated by homes or commercial, industrial or institutional installations (in their role as end-users of a product), which can no longer be used for their original purpose.²

If a product has the test procedure logo, it means that at least 60% of the residue left by the product will naturally decompose in less than 28 days.

ECOLOGO certified products are certified for reduced environmental impact. ECOLOGO certifications are voluntary, multi-attribute, lifecycle based environmental certifications that indicate a product has undergone rigorous scientific testing, exhaustive auditing, or both, to prove its compliance with stringent, third-party, environmental performance standards.⁴

Composting is a biological treatment process that allows for the biodegradation (biooxidation) of organic waste, under the action of aerobic microorganisms (living in the presence of oxygen). The organic waste is first mixed with structuring agents (e.g. wood chips) to increase aeration, then placed in windrows, piles or in a reactor.

These products can be reused several times without their condition deteriorating.

Compost is obtained after reaching a thermophilic phase (temperature between 45°C and 70°C) and a subsequent maturation phase.⁵ However, it is necessary to check if the products are accepted in your municipality.

These products are freezer safe.

These products offer increased security in a pandemic context.

These products are oven safe.

These products are made in Quebec.

These products are microwave safe.

Product codes in blue mean that these products are not part of our regular inventory and, therefore, cannot be exchanged or refunded. Orders are delivered on average in 15 working days, but can take longer depending on the product.

The **ecological attributes** associated with the products in this catalog were updated on March 11, 2022. They may differ from one municipality to another and change during the year depending on various factors, including technological advances.

How to dispose of our products after use?

In this catalog you will find detailed ecological attributes of hundreds of products, but for a general overview, you can see a checklist on the next page on what to do with our packaging after use.

Depending on the product's type, you should consider the following steps before putting it in the trash.

Recycling a product gives it another life and saves the natural resources and energy needed to make new products. Putting a recyclable item in the compost or in your organic waste collection is much better than throwing it in the garbage, but it ends, the useful life of this product.

Did you know:

The end-of-life disposal of a product differs from one municipality to another. It is therefore important to first check with your municipality whether a product is recyclable or compostable.

You can also consult the mobile application **Ça va où?**

				NOTICES
Paper bags	X			
Paper bags, stained with food		X		
Bread bags, with window	X			Ideally, you need to separate the window from the bag.
Plastic bags, including reclosable bags (except the "stand-up" bags)	X			Ideally, you must put the bags you want to recuperate in a knotted transparent bag.
Food film	X			Ideally, you must put the film you want to recuperate in a knotted transparent bag.
PLA bags or other biodegradable plastic			X	
Plastic bags or food films stained with food			X	
Plastic containers, plates and bolws #1, #2, #3, #4, #5 or #7	X			Rinse container before recycling.
PLA (polylactic acid) containers			X	
Plastic (PS or #6) containers, plates and bolws, including styrofoam			X	
Plastic utensils (all types, including PLA)			X	
Aluminum containers, clean or stained with food	X			
Bagasse containers, plates and bolws		X		
Pulp containers, plates and bolws	X	X		
Pulp or bagasse containers, plates and bolws stained with food		X		
Paperboard containers and boxes, clean or slightly stained with food	X	X		
Paperboard containers and boxes, very soiled with food		X		
Glass jars	X			
Hot beverage paperboard containers with polyethylene (plastic) lining inside (example: coffee cup)	X			Some municipalities refuse these containers.
PS (plastic #6) lids for cup			X	
RPET, PET (plastic #1) and PP (plastic #5) cups	X			Note, however, that the City of Montreal has banned all plastic cups, no matter what type.
PS (plastic #6) cups			X	
Plastic coffee stirrers			X	
Coffee stirrers and wood or paper utensils		X		Some municipalities do not accept wood stirrers and utensils in their organic waste collection.
Plastic straws (all types, including PLA)			X	
Paper or wheat straws		X		
Facial tissues		X		
Napkins		X		
Bathroom tissue		X		
All purpose towels		X		
Paper hand towels		X		Most of the packaging for these products is recyclable, whether it is paper or plastic; check the inscription on the product.

Always there for you.

RECYC-QUÉBEC
Québec

1 RETHINK

Reduce resource consumption and preserve ecosystems

- Ecodesign
- Responsible consumption and procurement
- Process optimization

2 OPTIMIZE

2.1 Intensify product use

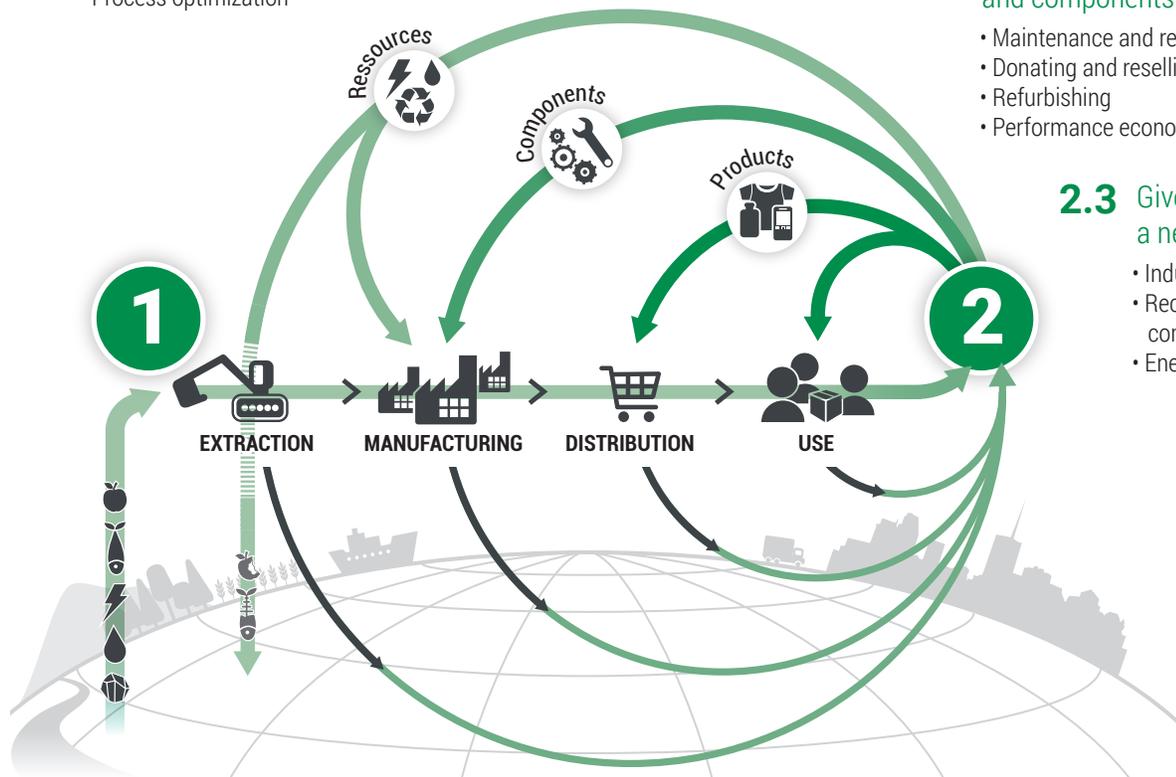

- Sharing economy
- Short term renting

2.2 Extend the life of products and components

- Maintenance and repair
- Donating and reselling
- Refurbishing
- Performance economy

2.3 Give resources a new life

- Industrial ecology
- Recycling and composting
- Energy recovery

A circular economy is "a production, exchange and consumption system that optimizes the use of resources at all stages of the life cycle of a good or a service, in a circular logic, while reducing the environmental footprint and contributing to the well-being of individuals and communities!".

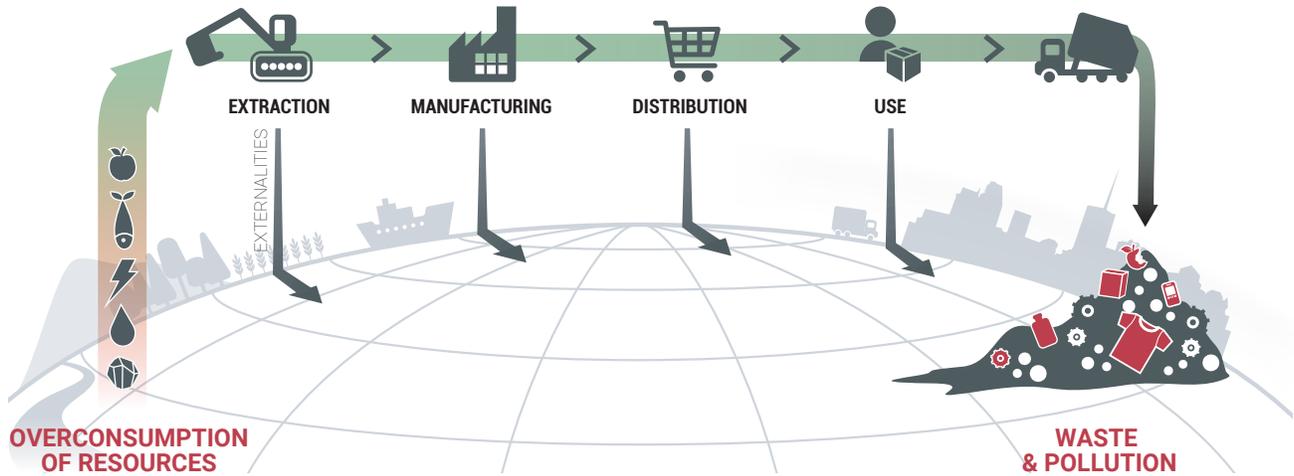

A circular economy is a combination of strategies and business models that aim to close material loops, to optimize the use of resources, and reduce the level of virgin resources consumed.

This new economic model eases pressure on resources, increases GDP, creates local jobs and significantly reduces greenhouse gas emissions (GHG).

Shorter and more local loops should be favoured.

Source :

1 <https://www.recyc-quebec.gouv.qc.ca/sites/default/files/documents/feuillelet-economie-lineaire-circulaire-english-version.pdf>

Today's "linear economy" model is unsustainable.

We must reconsider our modes of production and consumption in order to extract fewer resources upstream, stop throwing away downstream, and reduce or even entirely avoid waste at each step of the value chain.

On a global scale, only 8.6% of extracted resources are circled back into the economy after use.¹

A number of essential resources are already at critical availability levels.

Definitions of materials used for packaging

MATERIAL	DESCRIPTION
Bagasse	Bagasse is the fibrous residue left after the sugarcane has been extracted. This paper-like substance is transformed into a wide variety of products like containers, plates, and bowls. ¹
PLA	PLA, also known as Polylactic Acid, is a plant-based plastic made from corn starch. ² It is versatile, compostable, and best of all, not petroleum derived.
Cardboard, pulp and paper	Whether it is paper packaging, flat, corrugated or multi-layer cardboard or kraft paper bags, all products made from these materials are fully recyclable. ³
Aluminum	Foil and aluminum containers can be recycled over and over again. ³
PET (Plastic #1)	Polyethylene terephthalate. The recyclability of this plastic is quite good, as there are some recycling options. RPET is made of recycled PET. ⁴
HDPE (Plastic #2)	High-density polyethylene. HDPE is the most commonly recycled plastic and is considered one of the safest forms of plastic. It is the most coveted plastic resin by recyclers, according to Recyc-Québec. ⁴
PVC (Plastic #3)	Polyvinyl chloride. Very low recyclability, mainly due to the presence of additives. ⁴
PP (Plastic #5)	Polypropylene. The recyclability of this plastic is quite good, since it can be recycled several times before reaching the end of its life. ⁴
LDPE (Plastic #4)	Low-density polyethylene. Used mainly for plastic bags, low recyclability. It is not normally recycled. ⁴
PS (Plastic #6)	Polystyrene. Very low recyclability. Industrial recycling processes are not very developed and there are only a few recycling options. PS should be avoided where possible. ⁴
Plastic #7	Many plastics are included in this category. Very low recyclability, mainly due to the presence of presence of additives. ⁴

New regulation on the single-use plastic and plastic bag in the City of Montreal

PROHIBITED PRODUCTS:

All plastic shopping bags, regardless of thickness, including those made from biodegradable plastic (except for bags used to carry food in the store, such as fruits and vegetables)

All single-use items made from plastic bearing the following identification codes :

- Food tray (excluding meat and fish): #6
- Plate: #6
- Container and lid: #6
- Lid for cup or glass: #6
- Cup or glass: #1, 2, 3, 4, 5, 6 or 7
- Stirrer sticks: #1, 2, 3, 4, 5, 6 or 7
- Straws: #1, 2, 3, 4, 5, 6 or 7
- Utensils for on-site consumption: #1, 2, 3, 4, 5, 6 or 7
- Utensil on request to take out or by delivery: #6
- Any single-use container or tableware made from degradable plastic

Starting September 1st, 2022

Starting March 1st, 2023

WHO IS AFFECTED?

The following establishments in the boroughs of Montreal that:

- offer food service
- package food items for retail sale

WHO IS EXCLUDED?

The following establishments in the boroughs of Montreal that:

- do not receive consumers in-house and offer only delivery service
- Non-profit organizations whose mission includes food distribution

Molded fiber is twice as nice

When it comes to keeping foods hot and crisp, molded fiber delivers. Unlike foam containers, our sugarcane clamshells are breathable, which means you won't have to deal with condensation and sogginess. Chicken tenders, fries and the like will stay just as you want them – hot and crispy. As an added bonus, the look and feel of sugarcane sends a strong sustainability message. So go ahead. Give 'em the double whammy of performance AND green.

GREENSTRIPE® by Eco-Products®

Sugarcane Clamshells

RENEWABLE
RESOURCES

Performance Features:

Breathability keeps foods crisp

Retains temperature

Microwaveable and freezable

Hot and cold food friendly

Grease and cut resistant

Texture helps containers stack without sliding

Won't melt and no liner needed - hot food can go straight in from the fryer

HOT FOOD
FRIENDLY

Environmental Benefits:

Made with rapidly renewable resources

Meets ASTM D6868 standards for commercial compostability (facilities may not be available in your area)

COLD FOOD
FRIENDLY

• In a test of sugarcane clamshells and foam clamshells, for dry dishes the sugarcane clamshell maintained the temperature the best.

• When moisture was introduced, the sugarcane clamshell maintained temperature better than a paperboard clamshell and fluted clamshell. While the foam clamshell maintained heat better than the sugarcane clamshell once moisture was added, the breathability of fiber allowed crisp foods to remain more crisp than they did in foam.

3041150	5/16"x48"x375'	1/bundle
999- A39133	1/2"x48"x250'	1/bundle

Did you know:
Some municipalities accept bubble wrap in their recycle bins.

We advise you to verify if your municipality accepts them with the help the application **Ça va où?**

Did you know:

The protective foam is **recyclable**?

These products are made from LDPE resin (plastic #4).

To check out all of our protective foam rolls, visit the **carrousel.ca**

Cornstarch protective foam peanuts bag

BIODEGRADABLE

CODE	DESCRIPTION	QUANTITY
3033213	20 ft ³	1 unit

Made from corn, wheat and potato starch, these foam chips dissolve completely in water.

Protective air pillow cushions Fill-Air Extreme®

CODE	DESCRIPTION	QUANTITY
999-A35056	8"x3"x4200'	1/roll
5830008	8"x5"x4200'	1/roll
999-A25328	8"x8"x4200'	1/roll
5830010	10"x5"x4200'	1/roll
999-A34347	10"x8"x4200'	1/roll
5830012	12"x8"x4200'	1/roll
999-A33759	12"x3"x4200'	1/roll

These air pillow cushions work with the Fill-Air Rocket® inflatable void fill system (# 98F0062). The system is sold separately.

The superior sealing technology and material strength of Fill-Air® packaging makes it highly reuseable. If material must be disposed, Fill-Air® packaging loses 99.3% of its volume when deflated.

SHIPPING MATERIALS

Boîtes

Northbox® insulated cardboard box with insulator

CODE	DESCRIPTION	QUANTITY
6230404	15"x11"x13" - insulator 0,38"	25/pack
6230405	15"x11"x13" - insulator 0,38"	100/pallet
6230400	19"x12"x12" - insulator 0,38"	25/pack
6230402	19"x12"x12" - insulator 0,38"	100/pallet
6230401	19"x12"x12" - insulator 1"	13/pack
6230403	19"x12"x12" - insulator 1"	100/pallet

This revolutionary insulated box was specially designed by Cascades for the online sale of refrigerated products. You can now deliver everything fresh to your home in an eco-friendly way. In fact, this box is made of 100% recycled materials and is entirely recyclable.

Shipping mailers

Curby® kraft paper mailers

CODE	DESCRIPTION	QUANTITY
1710021	9,875"x9,50"	80/case
1710022	9,875"x15,50"	80/case
1710023	11,875"x18,5"	80/case

Made from recyclable paper, this mailer is lined with an innovative honeycomb paper structure - a cushioning material that offers substantial benefits over traditional wrapping materials, including bubble, foam, and other paper materials. The Curby Mailer was designed to replace and offer better protection than traditional polybubble and kraft mailers.

Cascades, proud sustainable food packaging supplier of Carrousel since 1971

Talk to your sales expert about these **recyclable** solutions:

- ☑ 100% recycled cardboard tray
- ☑ 100% recycled PET clamshell and overwrap tray
- ☑ The **northbox**®, isothermal box, for the delivery of fresh products, made of recycled cardboard

Adhesive tape

Water-activated tape (WAT)

CODE	DESCRIPTION	QUANTITY
2500013	«K03720» 38mm x 152m	20/case
2500014	«K2004» 38mm x 152m	20/case
2501040	«K2164» 101mm x 182m	6/case
2502026	«VENOM K9300» 70mm x 150m	6/case
2502027	«VENOM K9302» 70mm x 183m	10/case
2502028	«K2626» 72mm x 150m	10/case
2502035	«K2664» 76mm x 1036m	2/case

Water-Activated Tape is a packaging tape (also called gummed tape or kraft tape) that, when wet, seals the box to which it is applied, thus becoming part of the box. When it comes to security and packaging speed, Water-Activated Tape is better, faster and stronger than plastic tape.

STRAPPING

Polypropylene strapping

Did you know:

The polypropylene strapping is **recyclable**?

Simply cut it into short lengths and place them in the blue bin.

To check out all of our polypropylene strapping, visit the [carrousel.ca](https://www.carrousel.ca)

Polyester strapping

Did you know:

Polyester strapping is made from **98% recycled material**?

It is also possible to recycle it, however, you must contact a specialized company to dispose of it.

To check out all of our polyester strapping, visit the [carrousel.ca](https://www.carrousel.ca)

STRETCH

FILM

Blown handwrap stretch film
OSC 75G Endure

CODE	DESCRIPTION	QUANTITY
5640327	13"x1476'	4/case
5640326	17"x1476'	4/case

These films are recyclable through the Carrou-Cycle program!
 Details on the next page.

This blown stretch film is the most recent innovation on the market and it stands out from the other conventional films through its exceptional composition: 75% recycled material, including 50% post-consumer!

In order to create such a product, Sigma has partnered with several recyclers to collect and recycle used stretch film, the least contaminated, from its customers, and then transform it back into stretch film. An excellent example of the circular economy!

**At Sigma, we're
 always thinking...**

**Of new ways to
 add value through
 sustainability.**

SIGMA
ENDURE

Gives a **second life** to stretch film!

Did you know that millions of pounds of used stretch film are sent to landfills each year?

As the largest distributor of packaging products in Quebec, Carrousel is very proud to have developed an innovative and ecoresponsible solution that will help reduce the amount of residual material created by this packaging.

Since January 2021, it is now possible to recycle used stretch film and transform it into new products, including shipping bags for e-commerce, through the innovative Carrou-Cycle program.

How it works?

1.

When a delivery is made to a customer, the Carrousel driver picks up the used stretch film and brings it back to one of Carrousel's warehouses.

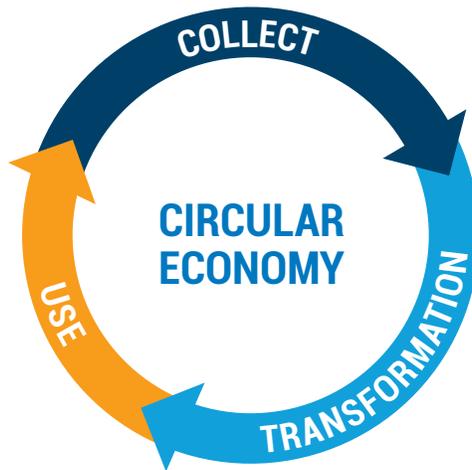

2.

When Carrousel picks up an order at Polykar, it delivers a load of used stretch film. This optimizes trips and reduces ecological footprint.

6.

The old bags are reused or put in the recyclable materials collection.

3.

Using the most modern equipment, the stretch film is crushed, cleaned and transformed into recycled resin pellets.

5.

The bags are put back into circulation and are used again by Carrousel's customers.

4.

The pellets are heated, pressed and used to make different types of pastic bags such as shipping bags for e-commerce.

Driven by Change, Powered by Sustainability™

Cascades was named 18th most sustainable corporation in the world in 2022 by Corporate Knight & # 1 in the packaging category.

See how Cascades PRO makes a difference.

From our sustainable development commitment:

4.3 x

less water when manufacturing its products than the North American paper industry average. Represents...

the amount contained in nearly **25,000** Olympic swimming pools.

2.4 x

less energy when manufacturing its products than the North American paper industry average. Represents...

savings equivalent to the annual consumption of **320,160** American households.

30.7 M

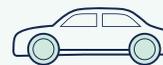

trees saved in 2021 by using 1.8M short tonnes of recycled fibres in Cascades products, which represents...

121x the size of Central Park (New York).

538

K tCO₂eq of greenhouse gas emissions saved in 2021. Which is the equivalent of...

the average yearly emissions of **117,028** cars.

Source: Based on North American pulp and paper industry average for 2021. And FisherSolve™ Next, 2022 Fisher International

To our products
Our products are backed
by many certifications:

We're proud to share that we've received certification from the Composting Manufacturing Alliance (CMA), a global leader in industrial composting standards, for 10 of our products.

TRUST POLYKAR'S 100% CERTIFIED COMPOSTABLE BAGS

Sustainable
Solution for
Organic Waste
Collection

Composting is no longer an afterthought. Polykar's certified compostable bags serve their purpose well and lend themselves perfectly towards the global consumer demand for environmentally responsible packaging. This is where quality meets sustainability as we continue to set the bar in the janitorial and sanitation market across North America with our eco-friendly product.

Compost More. Waste Less. It Matters.

COMPOSTABLE

For collection in municipal programs, where approved. Pour la collecte dans les programmes municipaux, ou approuvés.
