Provide products that are less harmful to our environment and that prevent food waste is not a new concept at Carrousel!

With the first- publication in 2018of an eco-friendly product catalog, our Engagement 500+ in 2019, and the adoption of a true company positioning in 2021, we have multiplied initiatives to raise awareness and inform our customers about eco-friendly solutions

More eco-friendly products, and a smaller catalog.

Our eco-friendly products are so numerous that this edition only includes Carrousel's most popular lines of products. Those will help businesses and organizations replace items targeted by regulations prohibiting the sale and distribution of single-use plastic items (SUPs).

The City of Montreal's regulations came into effect on March 28th, 2023. In the rest of Quebec, some municipal regulations are already in place or will be implemented soon. By the end of December 2023, the sale of certain SUPs will be prohibited throughout Canada. It has been prohibited to import or manufacture them as of December 2022.

To learn more about items that are subject to restrictions or prohibitions, refer to our guide on pages 4 and 5.

2018

- July Release of our first eco-responsible catalog

2019

- February Training given to our entire sales force by Éco Entreprises Quebec and Cascades
- March Launch of our 500+ Commitment program through which we committed to adding at least 500 environmentally responsible products per year to our selection for the next 5 years
- Spring The 2nd edition of our ecoresponsible catalog is published, with a selection approved by Éco Entreprises Québec
Launch of the Eco-responsible solutions section on our website
- Summer Introduction of a new selection of reusable items
New partnership with La Vague for the distribution of La tasse deposit system reusable coffee cups (see page 71)

2020

- Spring Launch of the 3rd edition of the ecoresponsible solutions catalog with more than 1200 products, including several industrial packaging items.
- Summer Launch of Carrou-cycle, our stretch film recycling program with Polykar (see page 98)

2021

- Spring Acquisition of GRV and their cleaning products and dishwasher solutions (see page 106)
Launch of the 4th edition of the ecoresponsible catalog
- Fall A new corporate position has been adopted: to contribute to the preservation of the planet's resources

2022

- Spring Launch of the 5th edition of the ecoresponsible catalog: removal of PLA items and adding the "Made in Quebec" pictogram
Launch of the Fitobak, our organic waste bag, designed and manufactured by our Carfabel paper bag factory (see page 122)
- Summer Creation of the Eco-Innov Center, a place for exchange and sharing to develop knowledge and promote best practices (see page 13).
Launch of our Terra stretch film, made from 75% recycled material (see page 97)
- Fall Launch of tools (webinars, guide, icons on our website, etc.) to help all targeted businesses better understand the regulations on single-use plastics and guide them towards more environmentally responsible alternatives (see page 6)

2023

- Spring Launch of a new edition of the ecoresponsible catalog

Coming up: Launch of La boîte, a new returnable container, with La Vague (see page 22)

Which can be transformed so as to be reintroduced into a production cycle for the manufacture of new products.¹ It is necessary to check whether the products are accepted in your municipality.

A biodegradable product is likely to be completely decomposed by living organisms.³ The OECD 301D test protocol (Organization for Economic Cooperation and Development) certifies that a product is biodegradable.

If a product has the test procedure logo, it means that at least 60% of the residue left by the product will naturally decompose in less than 28 days.

Composting is a biological treatment process that allows for the biodegradation (biooxidation) of organic waste, under the action of aerobic microorganisms (living in the presence of oxygen). The organic waste is first mixed with structuring agents (e.g. wood chips) to increase aeration, then placed in windrows, piles or in a reactor.

Compost is obtained after reaching a thermophilic phase (temperature between 45°C and 70°C) and a subsequent maturation phase.⁵ However, it is necessary to check if the products are accepted in your municipality.

These products can be reused several times without their condition deteriorating.

These products are made in Quebec.

Pre-consumer recycled contents are materials that are redirected from the disposal stream during the manufacturing process and introduced for use in a different industrial manufacturing process.

Post-consumer recycled contents are materials that are generated by homes or commercial, industrial or institutional installations (in their role as end-users of a product), which can no longer be used for their original purpose.

ECOLOGO certified products are certified for reduced environmental impact. ECOLOGO certifications are voluntary, multi-attribute, lifecycle based environmental certifications that indicate a product has undergone rigorous scientific testing, exhaustive auditing, or both, to prove its compliance with stringent, third-party, environmental performance standards.²

These products are freezer safe.

These products are oven safe.

These products are oven safe.

As of March 28, 2023, the sale or offer of these products will be prohibited. Some establishments are excluded from this regulation. See details on pages 6 and 7.

2 <https://www.ul.com/resources/ecologo-certification-program> (open translation)

Product codes in blue mean that these products are not part of our regular inventory and, therefore, cannot be exchanged or refunded. Orders are delivered on average in 15 working days, but can take longer depending on the product.

The **ecological attributes** associated with the products in this catalog were updated on March 11, 2022. They may differ from one municipality to another and change during the year depending on various factors, including technological advances.

Guide to single-use plastic items allowed and prohibited

Federal and Montreal regulations

Montreal and the Government of Canada have adopted regulations prohibiting the sale and offer of some single-use plastic products.

Beside is a summary of the targeted articles, sold at Carrousel.

Effective dates

Montreal : March 28, 2023

Ban already in place for plastic bags

Federal: December 20, 2023

The manufacture and import of the banned items will be prohibited as of December 20, 2022.

 Allowed

 Allowed or prohibited according to some criteria or applications, see reverse.

 Prohibited

	Federal	Montreal
 Checkout bags, including those made of degradable plastic		
 Bags for carrying food in the store (e.g. fruits and vegetables)		
 Reusable plastic shopping bags		
 Stir sticks		
 Cutlery for on-site consumption		
 Cutlery on request for delivery/takeout		
 Straws		
 Foam foodservice ware ( expanded ou extruded)		
 Black food containers for food or beverage that is ready to be consumed		
 Black food containers for food to be reheated or not ready to eat		
 Foodservice ware and cups made of non-black, non-expanded or extruded  plastic		
 Food containers and tableware made of non-black     plastic		
 Foodservice ware made of compostable plastic (including PLA)		
 Cups and lids made of any non-black plastic		
  Plastic lids		

Notes

Federal Regulation

Reusable plastic shopping bags

Bags meeting the following criteria are accepted:

- don't break if they are used to carry 10 kg over a distance of 53 m 100 times;
- don't break if they are washed in accordance with the washing procedures specified for a single domestic wash (standard ISO 6130).

Cutlery and straws

Plastic utensils and straws meeting the following criteria are accepted as they are considered reusable:

- not made of polystyrene or polyethylene;
- can tolerate 100 wash cycles in a household dishwasher.

Flexible straws

Some exceptions will be in effect for flexible straws. See the federal regulation on this subject.

Foam foodservice ware (♻️ expanded or extruded)

They are allowed only if they are trays and are used to package food that is not ready to be eaten (e.g. vegetables, meat, fish)

Black food containers

Only black containers meeting the following criteria are accepted:

- contain foods that need to be prepared (baking in the oven, heating in a microwave or toaster) before they can be eaten or meat and fish that are not ready to eat or vegetables;
- are not made of foam (♻️ expanded or extruded) or PVC.

Compostable plastic foodservice ware

It is important to differentiate between compostable plastic, such as PLA, and oxo-degradable plastic, which is prohibited. Also note that all black packaging is prohibited, even if it is compostable plastic.

Cups and lids

Foam cups (♻️ expanded or extruded) as well as black lids and black cups are prohibited.

Montreal Regulation

Businesses affected and not affected

The regulation concerns establishments located in the boroughs of Montreal that offer food service or that

- package food items for retail sale. Excluded are : establishments that do not receive consumers inhouse and offer only delivery service;
- non-profit organizations whose mission include food distribution.

Cutlery for delivery/takeout

Utensils made of ♻️ plastic are not permitted under any circumstances.

Foam foodservice ware (♻️ expanded or extruded)

Seuls les plateaux for emballer de la viande ou du poisson sont permis.

Black foodservice ware

Foodservice ware made of plastic ♻️ (expanded, extruded or not) are prohibited, regardless of their color.

Definitions of materials used for packaging

MATERIALS	DESCRIPTION
Bagasse	Bagasse is the fibrous residue left after the sugarcane has been extracted. This paper-like substance is transformed into a wide variety of products like containers, plates, and bowls. ¹
Cardboard, pulp and paper	Whether it is paper packaging, flat, corrugated or multi-layer cardboard or kraft paper bags, all products made from these materials are fully recyclable. ³
PET (Plastic #1)	Polyethylene terephthalate. The recyclability of this plastic is quite good, as there are some recycling options. RPET is made of recycled PET. ⁴
HDPE (Plastic #2)	High-density polyethylene. HDPE is the most commonly recycled plastic and is considered one of the safest forms of plastic. It is the most coveted plastic resin by recyclers, according to Recyc-Québec. ⁴
PLA	PLA, also known as Polylactic Acid, is a plant-based plastic made from corn starch. ² It is versatile, compostable, and best of all, not petroleum derived.
Aluminium	Foil and aluminum containers can be recycled over and over again. ³
PVC (Plastic #3)	Polyvinyl chloride. Very low recyclability, mainly due to the presence of additives. ⁴
LDPE (Plastic #4)	Low-density polyethylene. Used mainly for plastic bags, low recyclability. It is not normally recycled. ⁴
PP (Plastic #5)	Polypropylene. The recyclability of this plastic is quite good, since it can be recycled several times before reaching the end of its life. ⁴
PS (Plastic #6)	Polystyrene. Very low recyclability. Industrial recycling processes are not very developed and there are only a few recycling options. PS should be avoided where possible. ⁴
Plastic #7	Many plastics are included in this category. Very low recyclability, mainly due to the presence of additives. ⁴

Find the ecoresponsible products on the web site

This catalog does not contain all the ecoresponsible products available at Carrousel. We have selected our most popular lines, which will replace items covered by regulations prohibiting the sale and distribution of single-use plastic items.

To view our complete selection, visit carrousel.ca and choose the ecological attributes that interest you to filter your research.

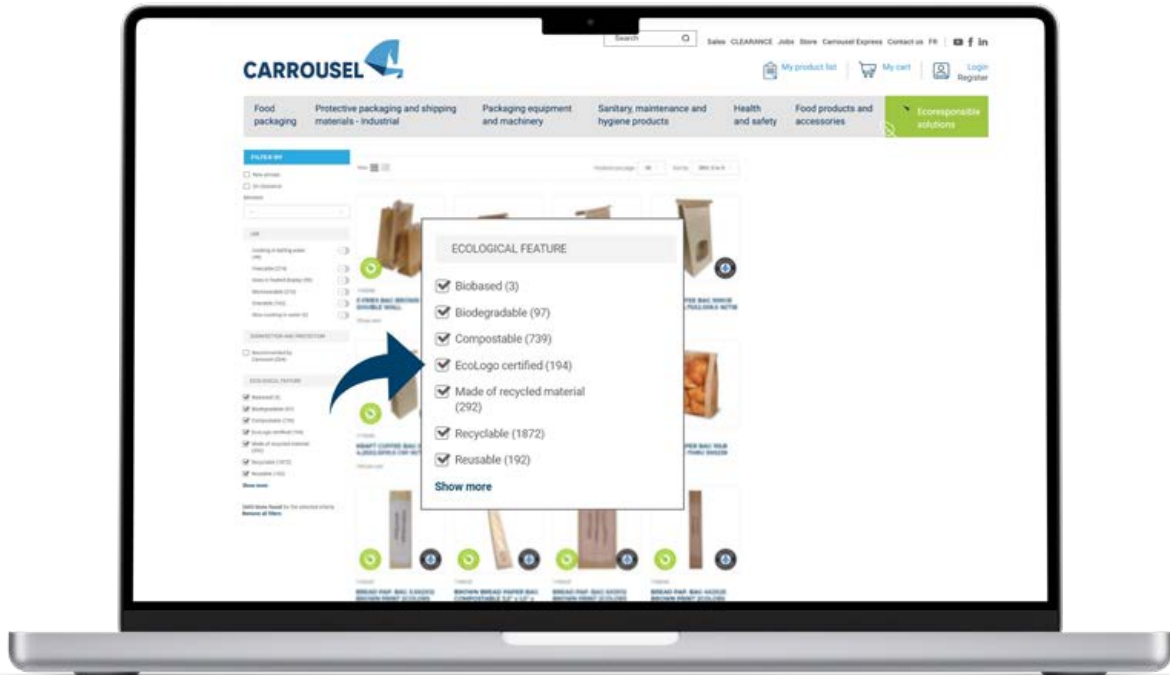

Moreover, in order to easily identify on our website the single-use plastic products that are or will be banned or restricted at the federal level or in the City of Montreal, you will find two new labels on the photo of the affected products:

Means that a product is or will be banned at the federal level. It may also be banned at the City of Montreal level.

Means that the use of this product is or will be restricted according to certain criteria or uses and/or that it is or will be banned only in the the City of Montreal.

More explanations can be found in the detailed article sheet.

How to dispose of our products after use?

In this catalog you will find detailed ecological attributes of hundreds of products, but for a general overview, you can see a checklist on the next page on what to do with our packaging after use.

Depending on the product's type, you should consider the following steps before putting it in the trash.

Recycling a product gives it another life and saves the natural resources and energy needed to make new products. Putting a recyclable item in the compost or in your organic waste collection is much better than throwing it in the garbage, but it ends, the useful life of this product.

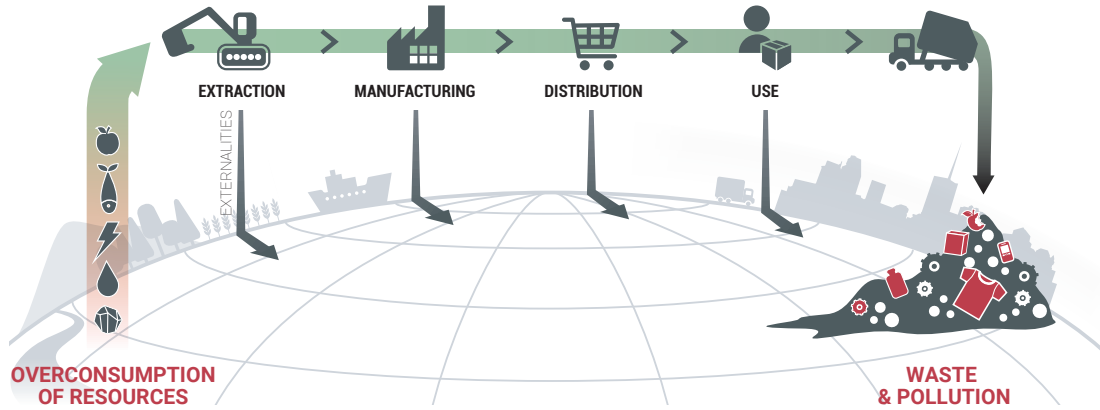

Did you know:

The end-of-life disposal of a product differs from one municipality to another. It is therefore important to first check with your municipality whether a product is recyclable or compostable.

You can also consult the mobile application **Ça va où?**

				NOTICES
Paper bags	X			
Paper bags, stained with food		X		
Bread bags, with window	X			Ideally, you need to separate the window from the bag.
Plastic bags, including reclosable bags (except the "stand-up" bags)	X			Ideally, you must put the bags you want to recuperate in a knotted transparent bag.
Food film	X			Ideally, you must put the film you want to recuperate in a knotted transparent bag.
PLA bags or other biodegradable plastic			X	
Plastic bags or food films stained with food			X	
Plastic containers, plates and bowls #1, #2, #3, #4 or #5	X			Rinse container before recycling.
PLA (polylactic acid) containers			X	
Plastic (PS or #6) containers, plates and bowls, including styrofoam			X	
Plastic utensils (all types, including PLA)			X	
Aluminum containers, clean or stained with food	X			
Bagasse containers, plates and bowls		X		
Pulp containers, plates and bowls	X	X		
Pulp or bagasse containers, plates and bowls stained with food		X		
Paperboard containers and boxes, clean or slightly stained with food	X	X		
Paperboard containers and boxes, very soiled with food		X		
Glass jars	X			
Hot beverage paperboard containers with polyethylene (plastic) lining inside (example: coffee cup)	X			
PS (plastic #6) cups and lids for cup			X	
RPET, PET (plastic #1) and PP (plastic #5) cups	X			Note, however, that the City of Montreal has banned all plastic cups, no matter what type.
Aluminium cups	X			
Plastic coffee stirrers			X	
Coffee stirrers and wood or paper utensils		X		Some municipalities do not accept wood stirrers and utensils in their organic waste collection.
Plastic straws (all types, including PLA)			X	
Paper or wheat straws		X		
Facial tissues		X		
Napkins		X		
Bathroom tissue		X		
All purpose towels		X		
Paper hand towels	X	X		Most of the packaging for these products is recyclable, whether it is paper or plastic; check the inscription on the product.

Linear economy

Source :
 1 <https://www.recyc-quebec.gouv.qc.ca/entreprises-organismes/mieux-gerer/economie-circulaire>

Circular economy

Reduce resource consumption and preserve ecosystems

- Ecodesign
- Responsible consumption and procurement
- Process optimization

2.1 Intensify product use

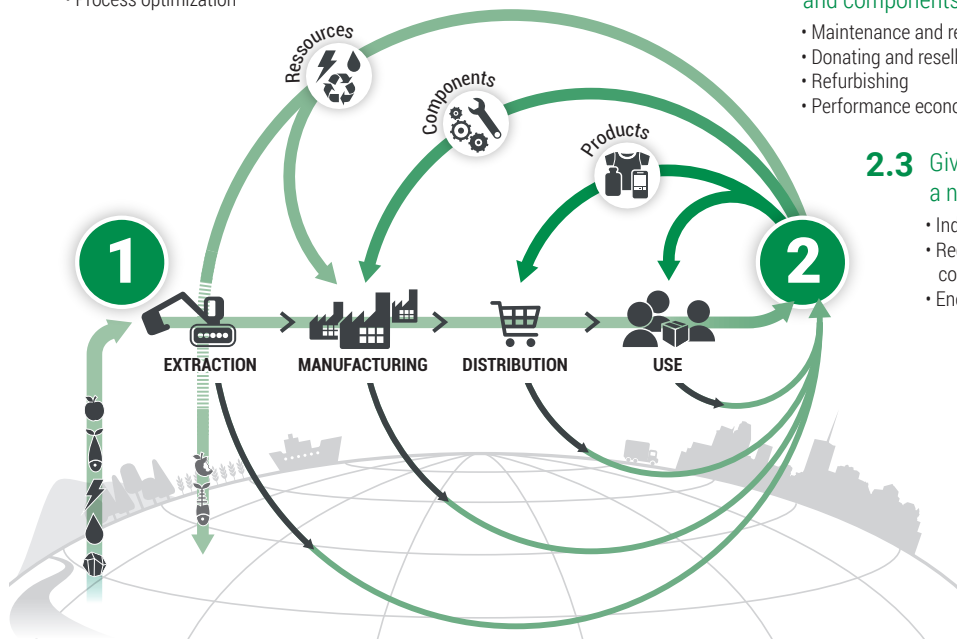

- Sharing economy
- Short term renting

2.2 Extend the life of products and components

- Maintenance and repair
- Donating and reselling
- Refurbishing
- Performance economy

2.3 Give resources a new life

- Industrial ecology
- Recycling and composting
- Energy recovery

A circular economy is a production, exchange and consumption system that optimizes the use of resources at all stages of the life cycle of a good or a service, in a circular logic, while reducing the environmental footprint and contributing to the well-being of individuals and communities¹.

A circular economy is a combination of strategies and business models that aim to close material loops, to optimize the use of resources, and reduce the level of virgin resources consumed. This new economic model eases pressure on resources, increases GDP, creates local jobs and significantly reduces greenhouse gas emissions (GHG). Shorter and more local loops should be favoured.

Source : 1 <https://www.recyc-quebec.gouv.qc.ca/entreprises-organismes/mieux-gerer/economie-circulaire>

As a key player in their industry’s transformation, Emballages Carrousel has created the Eco-Innov Centre (EIC): a collaborative space to promote the eco-friendly practices of their customers, partners and suppliers.

A place for sharing and exchanging ideas, expanding knowledge, encouraging best practices and promoting healthy solutions, inspired by circular economy strategies.

Last but not least, the EIC is intended as a place for considering the social and environmental impacts of our daily activities...

For fair and better packaging.

Always there for you.

BAGS

As of **December 20, 2023**, the sale or distribution of plastic shopping bags, including those made of degradable plastic, will no longer be permitted in Canada.

It is already prohibited in the districts of the City of Montreal.

6230401	19"x12"x12" - insulator 1"	13/pack
6230403	19"x12"x12" - insulator 1"	100/palette

This revolutionary insulated box was specially designed by Cascades for the online sale of refrigerated products. You can now deliver everything fresh to your home in an eco-friendly way. In fact, this box is made of 100% recycled materials and is entirely recyclable.

Shipping mailers

Curby® kraft paper mailers

CODE	DESCRIPTION	QUANTITY
1710021	9.875"x9.50"	80/case
1710022	9.875"x15.50"	80/case
1710023	11.875"x18.5"	80/case

Made from recyclable paper, this mailer is lined with an innovative honeycomb paper structure - a cushioning material that offers substantial benefits over traditional wrapping materials, including bubble, foam, and other paper materials. The Curby Mailer was designed to replace and offer better protection than traditional polybubble and kraft mailers.

Courroies en polypropylène

Did you know:

The polypropylene strapping is **recyclable** ?

Simply cut it into short lengths and place them in the blue bin.

To check out all of our polypropylene strapping, visit the [carrousel.ca](https://www.carrousel.ca)

Courroies en polyester

Did you know:

Polyester strapping is made from **98% recycled materials** ?

It is also possible to recycle it, however, you must contact a specialized company to dispose of it.

To check out all of our polyester strapping, visit the [carrousel.ca](https://www.carrousel.ca)

Blown handwrap stretch film
OSC 65G Terra

MADE FROM 75%
RECYCLED MATERIALS
(25% POST-CONSUMPTION)

RECYCLABLE

CODE	DESCRIPTION	QUANTITY
5640328	13"x1476'	1 case
5640329	17"x1476'	1 case

TERRA is a blown handwrap stretch film made from 75% recycled material (25% post-consumer and up to 50% post-industrial). It has high puncture resistance, cling and stiffness. TERRA can be used in almost any manual application because of its toughness and is designed to be the most sustainable product in this market segment.

Give a **second life** to stretch film!

Did you know that millions pounds of used stretch film are sent to landfills each year?

As the largest distributor of packaging products in Quebec, Carrousel is very proud to have developed an innovative and ecoresponsible solution that will help reduce the amount of residual material created by this packaging.

Since January 2021, it is now possible to recycle used stretch film and transform it into new products, including shipping bags for e-commerce, through the innovative Carrou-Cycle program.

How it works?

1.

When a delivery is made to a customer, the Carrousel driver picks up the used stretch film and brings it back to one of Carrousel's warehouses.

2.

When Carrousel picks up an order at Polykar, it delivers a load of used stretch film. This optimizes trips and reduces ecological footprint.

6.

The old bags are reused or put in the recyclable materials collection.

3.

Using the most modern equipment, the stretch film is crushed, cleaned and transformed into recycled resin pellets.

5.

The bags are put back into circulation and are used again by Carrousel's customers.

4.

The pellets are heated, pressed and used to make different types of plastic bags such as shipping bags for e-commerce.

Driven by Change, Powered by Sustainability™

Cascades was named 20th most sustainable corporation in the world in 2023 by Corporate Knight.

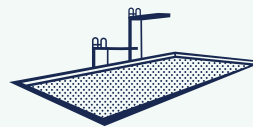

See how Cascades PRO makes a difference.

From our sustainable development commitment:

4.3 x

less water when manufacturing its products than the North American paper industry average. Represents...

the amount contained in nearly **25,000** Olympic swimming pools.

2.4 x

less energy when manufacturing its products than the North American paper industry average. Represents...

savings equivalent to the annual consumption of **320,160** American households.

30.7 M

trees saved in 2021 by using 1.8M short tonnes of recycled fibres in Cascades products, which represents...

121x the size of Central Park (New York).

538

K tCO₂eq of greenhouse gas emissions saved in 2021. Which is the equivalent of...

the average yearly emissions of **117,028 cars**.

Polykar®

Premium

Made from 100% recycled material, our trash bags offer superior performance. Guaranteed not to leak, tear or puncture easily, our bags hold up even when filled to capacity.

ESeries

These slightly thinner gauged trash bags represent an economical alternative to our Premium line and are also made from 100% recycled material.

Private Label

Our private-label solution is ideal for national distributors with a high sales volume. You'll receive the same quality and consistency that you'd expect from standard Polykar bags.

High Density

Our high density bags offer excellent strength-to-thickness ratio and are super light. Using up to 50% less plastic, they are perfect for offices or washrooms which collect lightweight waste.

Certified Compostable

Our certified compostable bags are the sustainable solution for organic waste collection. They are easy to manipulate, lightweight, waterproof and are more practical than paper bags.

Mint-X

Mint-X bags are especially made to keep raccoons and rodents away from waste receptacles. They are approved by Health Canada's PMRA and the United States EPA.
