

CARR♻️U-CYCLE

THE PROGRAM THAT GIVES A **SECOND LIFE** TO STRETCH FILM!

Each year, millions pounds of stretch film are used by many companies in Quebec. This material, most of which is currently sent to landfill sites, is a real environmental problem. As the largest distributor of packaging products in Quebec, Carrousel is very proud to have developed an innovative and eco-responsible solution that will help reduce the amount of residual material created by this packaging.

Carrousel has therefore joined forces with its longtime business partner, Polykar, a plastic bag manufacturer, to launch its brand-new recycling program for stretch film, **Carrou-cycle**.

This program, which implements the concept of the circular economy, will enable companies to meet their environmental commitments and transform used stretch film into new plastic products.

HOW IT WORKS?

1. When a delivery is made to a customer, the Carrousel driver picks up the used stretch film and brings it back to one of Carrousel's warehouses.

2. When Carrousel picks up an order at Polykar, it delivers a load of used stretch film. This optimizes trips and reduces ecological footprint.

6. The old bags are reused or put in the recyclable materials collection.

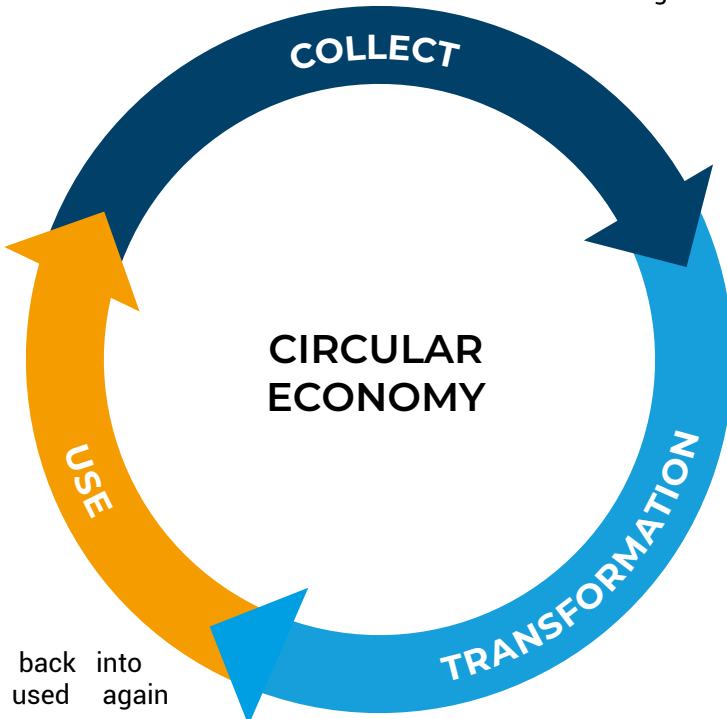

5. The bags are put back into circulation and are used again by Carrousel's customers.

3. Using the most modern equipment, the stretch film is crushed, cleaned and transformed into recycled resin pellets.

4. The pellets are heated, pressed and used to make different types of plastic bags such as shipping bags for e-commerce.
