

Greenhouses and Producers

Solutions rooted in your daily work

Whether you're a greenhouse grower or a market gardener, you cultivate freshness, quality, and respect for the land every day. At Carrousel, we understand your realities and your expectations. This catalog offers a curated selection of packaging solutions, equipment and hygiene and sanitation products designed for real-world use, including many items from Quebec and Canadian, clearly marked to support the local economy.

Member of the Association des producteurs maraîchers du Québec and the Canadian Produce Marketing Association, Carrousel is fully committed to supporting the key players in your industry.

To earn your trust, we focus on excellence. Our HACCP certification ensures rigorous and safe practices at every stage of our operations. As the driving force behind the Eco-Innov Center, we bring our industry together around concrete solutions to environmental challenges. Our Ecoresponsible certification also reflects our commitment to reducing our ecological footprint and working with you toward a sustainable future.

With over 5,000 products in stock and 15,000 more available on request, we meet all your needs in packaging, hygiene, equipment, health and safety. Our certified technicians provide turnkey service for the installation, maintenance, and repair of your equipment. And behind it all, you can count on the largest sales team in Quebec & Eastern Ontario, and a specialized customer service team to support you every step of the way.

Because behind every harvest, there are passionate people, Carrousel is proud to stand by your side, day after day.

A recyclable package is one that is collected in the recycling bin, sorted at a sorting facility and actually recycled—meaning it is processed and reintroduced into a production cycle to create new products—within an established market.

Although, since January 2025, the vast majority of containers and packaging can be placed in the recycling bin, this does not necessarily mean they are all effectively recycled. Carrousel considers packaging "recyclable" when well-established recycling streams exist in Quebec and Ontario.

A biodegradable product is likely to be completely decomposed by living organisms. ¹ The OECD 301D test protocol (Organization for Economic Cooperation and Development) certifies that a product is biodegradable. If a product has the test procedure logo, it means that at least 60% of the residue left by the product will naturally decompose in less than 28 days. These tests are conducted under optimal laboratory conditions.

These products are made in Quebec.

These products are made in Canada.

Articles displaying this label may be biologically recycled. There are two processes for the biological recycling of organic materials: composting and biomethanization.

The organic waste collection programs vary from one municipality to another, depending on the treatment process in place (composting or biomethanation). To determine whether a product is considered "compostable", Carrousel relied on the Ça va où? application as of March 2025. If a product is accepted in the collection programs of at least two of the following cities—Montreal, Quebec City and Sherbrooke—Carrousel considers it compostable. However, to ensure that a product is accepted in your local collection, we recommend checking directly on the application or with your municipality.

These products are made from pre- or post-consumer recycled materials.

Unfortunately, there is no Canadian standard for declaring packaging as "reusable." Carrousel has therefore considered items reusable if they can be used and washed multiple times without deteriorating.

Product **codes in blue** mean that these products are not part of our regular inventory and, therefore, cannot be exchanged or refunded. Orders are delivered on average in 15 working days, but can take longer depending on the products.

The **ecological attributes** associated with the products in this catalog were updated on July 7, 2025. They may differ from one municipality to another and change during the year depending on various factors, including technological advances.

List of materials used for packaging

MATIÈRE	DESCRIPTION
Bagasse	Bagasse is the fibrous residue from sugar cane once the juice has been extracted. This paper-like material is compostable if it is accepted in your municipal collection.
Cardboard, pulp and paper	Whether paper packaging, cardboard, corrugated cardboard or kraft paper bags, all products made from these materials are generally well recycled in Quebec and Ontario. These items can be composted if heavily soiled and accepted in your municipal collection.
PET (Plastic number 1)	Polyethylene terephthalate. The recyclability of this plastic is quite good, since there are a number of applications for it. RPET is made from recycled PET.
HDPE (Plastic number 2)	High-density polyethylene. This is the plastic resin most coveted by recyclers.
PLA	PLA, also known as Polylactic Acid, is a plant-based plastic derived from corn starch.
Aluminium	Aluminium containers and packaging can be recycled endlessly.
PVC (Plastic number 3)	Polyvinyl chloride. Low recyclability, due to the presence of numerous additives.
LDPE (Plastic number 4)	Low-density polyethylene. Used mainly for plastic bags, it has low recyclability.
PP (Plastic number 5)	Polypropylene. The recyclability of this plastic is quite good, since it can be recycled several times before reaching the end of its life.
PS (Plastic number 6)	Polystyrene. Very low recyclability. Industrial recycling processes are not highly developed and there are few outlets.
Plastic number 7	All other plastics. Not recycled in Quebec.

Fresh produce packaging

Cardboard trays

Thermoformed cardboard trays

Compostable and 100% recycled, these trays perfectly preserve your fruits and vegetables with their skins.

- **Cardboard thickness: 30pts**
- **Made from 100% recycled fibers**
- **FSC certified (Forest Stewardship Council®)**
- **CMA compostability certification (in industrial and municipal facilities)**
Except for trays with HDPE coating
- **Tested in refrigerated environments**
- **Compatible with automatic denesting**
- **Operates on high-speed equipment**
- **Soft edge compatible with shrink films**

Pulp trays

Earthcycle Non-vented pulp trays

Non-vented trays retain moisture, reduce dehydration and prevent wilting.

MADE IN CANADA

Earthcycle is the ultimate eco-friendly packaging: home compostable, recyclable and made from FSC®-certified renewable resources. A sustainable solution that enhances your brand and appeals to environmentally conscious consumers.

Packaging aligned with market expectations

For greenhouse growers and market gardeners, pulp and cardboard trays offer a packaging solution that is both functional and visually appealing. Their natural look pairs perfectly with fresh, local and organic products, while their eco-friendly qualities meet the growing consumer demand for sustainability. An ideal option to reinforce the consistency between your farming practices and your point-of-sale presentation.

Plastic trays

RPET Plastic trays

These RPET trays showcase your products with elegance. They offer superior strength and excellent crack resistance.

Tray former

Examples of folding types

CODE	DESCRIPTION	QUANTITY
98F0058	Automatic tray former	Unit

The automatic tray former picks up flat cartons directly from its magazine, then folds and fully assembles them, either using glue or a self-locking tray system. Once formed, the trays are placed onto an automated outfeed conveyor. The entire process operates without the need for an operator.
